InteliSecure Safeguards Critical Data Assets for Global Healthcare, Biotech and Pharmaceutical Companies

Nationally recognized medical research and treatment center among clients benefitting from InteliSecure's managed data protection services and Aperture platform

GREENWOOD VILLAGE, Colo. – November 10, 2020 – [InteliSecure®](#), a leading provider of data protection services, announces it is providing Managed Data Protection Services for a variety of high-profile companies in the healthcare, medical research, hospital, biotech and pharmaceutical industries, including a nationally recognized medical research and treatment center. The comprehensive data protection services support numerous platforms including Broadcom, Forcepoint™, Netskope and Microsoft® among others. In addition, InteliSecure has recently added a powerful enterprise-level toolkit to their services offering with the release of [Aperture™](#), the first cloud-native platform that integrates the Microsoft 365® data protection ecosystem.

Jeremy Wittkop, CTO, InteliSecure said, "Healthcare organizations and hospitals have a critical need to safeguard the privacy of the personal data of both their patients and partners. In addition, pharmaceutical and biotech companies need to carefully guard intellectual property connected to new medical treatments that are under development or being tested in clinical trials. At the core, InteliSecure's mission is to provide the highest level of data security and compliance services for the full range of healthcare organizations."

Data protection services are critical for healthcare organizations, which often perform a variety of multi-faceted roles dealing with increasing amounts of sensitive data, such as Personally Identifiable Information (PII), Payment Card Industry (PCI) data, Protected Health Information (PHI), clinical trial data, Intellectual Property and research discoveries.

Additionally, as part of compliance management for HIPAA, GDPR, CCPA and other regulatory and governance requirements, healthcare organizations must be able to track the access and use of information, and then be able to quickly and accurately identify and report incidents when an event occurs. The complexities of identifying who should access different types of data and enforcing policies requires knowledgeable staff and resources dedicated to managing the organization's security posture and intelligence issues.

As part of its implementation process, InteliSecure helps healthcare organizations identify and prioritize critical assets, develop customized processes and workflows, select the best data protection

technologies, and then operationalize their programs through IntelliSecure's security operations centers. As a result of these efforts, organizations gain:

- A proven, successful process for implementing and leveraging technologies such as DLP, CASB, and classification
- Unmatched expertise from security professionals who act as an extension of their security team for daily tasks in monitoring both structured and unstructured data
- A clear, more accurate picture of their security posture and how data is moving in out of the organization
- Analytics and reporting to help make more informed and effective decisions about information security priorities and resource allocation

About IntelliSecure

InteliSecure specializes in building solutions that simplify data protection for businesses of nearly every size. More than 500 clients with over 2 million managed users rely on our specialists and suite of data security services to protect the integrity and safety of their sensitive information. With more than 18 years' experience and partnerships with some of the world's biggest names in cyber defense, we reduce data security and compliance complexity. Our proven managed data protection services provide effective data protection at a lower cost, eliminating the strain on IT organizations and reducing the risk of information exposure and loss. Unlike other cybersecurity providers, we focus on business outcomes—providing data and reports that make sense to business and security executives alike. IntelliSecure serves clients globally with security operations centers in the United States, Saipan, and the United Kingdom. For more information, visit <http://www.intelisecure.com>.
