BUSINESS-CENTRIC MANAGED SECURITY SERVICES ONLY FROM INTELISECURE

InteliSecure

Conventional MSSP offerings are no longer sufficient to protect critical assets

InteliSecure is the first and only Managed Security Service Provider (MSSP) to challenge the status quo in cybersecurity by delivering business-centric capabilities that surpass conventional MSSP's on several key attributes as illustrated here.

Conventional/Legacy Managed Security Services **VS.** Business-Centric Managed Security Services

TRADITIONAL	INTELISECURE
STATIC & REACTIVE Static, reactive approach to monitoring security posture, often locked into legacy systems	**PROACTIVE & DYNAMIC** Proactive, dynamic systems and culture bringing together proven methodology, expertise, latest technologies and the human element in security
BLANKET PERIMETER APPROACH Programs designed as a "blanket perimeter"	**FOCUS ON CRITICAL ASSETS** Programs designed and focused around critical assets
ONE SIZE FITS ALL Bucketed business model to minimize costs	**CUSTOM-TAILORED** Customized execution tailored to each client's critical asset protection situation and needs
ONE DIMENSIONAL One dimensional perspective on threat defense typically focused on external threats	**MULTI-DIMENSIONAL** Multi-dimensional visibility protects against both internal and external threats
STANDARD CORRELATION Collect bits and bytes from multiple point products	**SINGLE INTELLIGENT PLATFORM** Compound correlation from all security devices combined with behavioral analytics through single portal powered by InteliSecure's management platform
LIMITED VISIBILITY No/limited visibility into how information moves through the organization	**GUIDED BY CONTENT & CONTEXT** Guided by policies defining the content and context of critical asset usage and users
LIMITED ACCESS MANAGEMENT No/limited point product privileged access management and change control	**SECURE ACCESS MANAGEMENT** Proprietary privileged access management to track user access and assure change management integrity
LIMITED CHANGE CAPABILITY & CONTROL Only MSSP can make changes, and no way to fully prevent unauthorized changes	**CUSTOMER CONTROL & FLEXIBILTIY** Validation process to prevent unauthorized changes, while clients retain true co-managment control and flexibility
LITTLE OR NO FOLLOW-UP Initial configuration with standard periodic updates, and only reactive configuration changes	**CONTINUOUS IMPROVEMENT** Continuous improvement process for fine-tuning technologies
FORMULAIC RESPONSE Conventional, anonymous tiered support escalation layers	**ENGAGED INSIGHT & FORESIGHT** Dedicated Security Operations Center members utilize insights and knowledge gained from knowing their client's information eco-system and technology infrastructure
